Data Analyst: SQL, Excel and Power Query, compliance reporting and automation

SUMMARY

Data analyst with an engineer's toolkit. At Amazon ICQA I owned the SOX-compliance IRDR workflow, researched 1,000+ inventory discrepancies, built the SQL and Excel reporting, dashboards and leadership reports behind inventory accuracy, and turned the research into tooling other associates used every day, including an autonomous root-cause agent. Before that, ten years running my own company's analytics platforms (200,000+ live game servers tracked) and three years in sales, as an assistant manager coaching a team.

SKILLS

Analytics: SQL, Excel, Power Query, VBA, dashboards and recurring reporting, root-cause analysis, SOX controls and audit trails, inventory accuracy and defect analysis
Automation: Python, JavaScript / TypeScript, TamperMonkey userscripts, tool-use AI agents, Anthropic and OpenAI-compatible APIs
Data: PostgreSQL, MySQL, SQLite, TimescaleDB, MongoDB
Communication: leadership reports, a network-wide quality recap deck, technical writing and runbooks, coaching and team leadership, consultative sales
Also: full-stack web development (Node.js, React), Linux and servers, payments and billing systems

EXPERIENCE

Software Engineer (Contract), PowerChat

Remote | Aug 2026 to Present

- Designed and shipped the Developer API platform end to end: PowerChat became an OAuth2 authorization server with scoped consent, token lifecycle, HMAC-signed webhooks and an inbound API, so third-party apps act as pseudo-platforms feeding chat, view counts, follows, subs, currency and tips into overlays. Re-implemented Streamlabs as the first official app on the new framework.
- Rebuilt the payments program as one system: a provider-agnostic charge rail with five adapters (Stripe Connect, Square, PayPal, an NMI card vault and NowPayments crypto), append-only ledgers where double-crediting is structurally impossible, Tipalti payouts, recurring Pro and viewer-subscription billing, signed webhooks per provider and an admin reconciliation surface.

Founder | Architect | Sole Engineer, OpenVibe

openvibe.live and 20+ domains | 2026 to Present

- Designed and built an entire network of seven apps that work together under one account: live streaming, sign-in and a virtual-currency wallet, media storage, a 169-tool toolbox, a browser game and a community hub. About 363,000 lines of code and 900+ web endpoints, all built, deployed and kept running by me alone.

Data Analyst, ICQA, Amazon

PAE2 | Arlington, WA | 2024 to Mar 2026

- Owned the SOX-compliance IRDR workflow: personally researched 1,000+ inventory discrepancies and built the data systems and reporting that satisfied Sarbanes-Oxley audit requirements.
- Built SQL and Excel reporting for inventory accuracy and defect visibility; delivered dashboards, recurring leadership reports and a network-wide quality recap deck.
- Shipped an autonomous root-cause agent that plans, gathers evidence and writes complete IRDRs, collapsing hours of research per defect into seconds.

Amnesty Floor Monitor, Amazon Robotics, Amazon

Robotics launch site | 2023 to 2024

- Monitored the Amazon Robotics floor during launch operations: enforced amnesty zones, cleared obstructions and kept pod and drive-unit flow safe.
- Investigated recurring pod, drive and workstation defects, documented patterns and escalated to RME and operations leadership to drive process fixes.

Assistant Manager / Sales Representative, Verizon Wireless

2020 to 2023

- Ranked among the district's top performers, consistently exceeding monthly quotas across phones, plans, accessories, protection and financing.
- Promoted to Assistant Manager; coached a team of 4 to 8 reps through 1-on-1s, floor coaching and skill workshops, and ran opens, closes, inventory and escalations.

Founder | Developer | Systems Admin, Own company, LLC

2015 to Present

- Built analytics platforms tracking 200,000+ live game servers: ingestion, search, ranking, dashboards and licensed partner APIs. Ranked first on Google for several major titles.
- Self-built and collocated 1U and 2U servers in datacenters; designed for scale and DDoS resilience and ran the whole LLC, from licenses and taxes to partner relations.

Earlier Technical & Business Work, Devolved | GModStore | eBay

2012 to 2015

- Built multiplayer game systems, monetized in-game economies and digital products sold through ScriptFodder and GModStore.
- Produced graphics, support docs, e-commerce listings and moderation workflows, and ran online communities at scale.

SELECTED PROJECTS

- **Autonomous IRDR Root-Cause Bot**: Autonomous agent that plans, gathers evidence, and writes complete SOX-compliant inventory research reports, hours of analysis down to seconds.
- **IRDR Quality Recap Deck**: Network-wide quality recap deck I authored and distributed covering SOX compliance metrics, root-cause trends, and corrective action plans.
- **Amazon Userscript Suite**: Six TamperMonkey userscripts that remove daily friction from internal ICQA and AFM tooling, deep links, table enrichment, bulk actions.

EDUCATION

Snohomish High School, WA. AP Statistics, Calculus, English, Creative Writing and Spanish. Self-taught engineer since age 12: systems, infrastructure, graphics, hardware and whatever the problem needs.
