Software Engineer: full-stack TypeScript and Node.js, payments, identity and live streaming

SUMMARY

Software engineer who builds complete products and keeps them running in production: platforms, APIs, payment systems, identity providers and live-streaming infrastructure. Rebuilt PowerChat's payments across five processors and designed its developer API platform; founder and sole engineer of OpenVibe, a network of seven connected apps under one login; ten years running my own company's analytics platforms and servers. Comfortable owning the whole thing: design, code, deployment and support.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Go, PHP, Lua, HTML / CSS
Backend: Node.js, Express, REST and event-driven design, Redis / BullMQ, Prisma, WebSockets
Data: PostgreSQL, MySQL, SQLite (WAL), MongoDB, TimescaleDB
Frontend: React, server-side rendering, performance profiling (Core Web Vitals, CDP)
Payments and identity: Stripe Connect, Square, PayPal, NMI, Tipalti, ledgers and idempotency, OAuth2 / OIDC providers, JWT (RS256) / JWKS, SSO, webhook signing
Streaming and realtime: WebRTC (mediasoup, werift), RTMP / SRT / WHIP, HLS / DASH, ffmpeg, TURN / coturn, live captions (whisper.cpp)
Infrastructure: Linux, nginx, systemd, Docker, GitLab CI, Cloudflare, Backblaze B2 / R2 / S3 APIs, zero-downtime deploys
AI: tool-use agents, Anthropic and OpenAI-compatible APIs, local inference (whisper.cpp, Ollama)

EXPERIENCE

Software Engineer (Contract), PowerChat

Remote | Aug 2026 to Present

- Designed and shipped the Developer API platform end to end: PowerChat became an OAuth2 authorization server with scoped consent, token lifecycle, HMAC-signed webhooks and an inbound API, so third-party apps act as pseudo-platforms feeding chat, view counts, follows, subs, currency and tips into overlays. Re-implemented Streamlabs as the first official app on the new framework.
- Rebuilt the payments program as one system: a provider-agnostic charge rail with five adapters (Stripe Connect, Square, PayPal, an NMI card vault and NowPayments crypto), append-only ledgers where double-crediting is structurally impossible, Tipalti payouts, recurring Pro and viewer-subscription billing, signed webhooks per provider and an admin reconciliation surface.
- Kept a fast-moving rewrite safe to ship: 240+ governed backend integration tests and 1,700+ frontend unit tests across the integrations, payments and Rumble connection work, with lint, typecheck and empty-database migration proofs in CI.

Stack: TypeScript, Node.js, Express, React, Prisma, PostgreSQL 17, Redis, BullMQ, OAuth2, Stripe, Square, PayPal, NMI, Tipalti, Docker, GitLab CI

Founder | Architect | Sole Engineer, OpenVibe

openvibe.live and 20+ domains | 2026 to Present

- Designed and built an entire network of seven apps that work together under one account: live streaming, sign-in and a virtual-currency wallet, media storage, a 169-tool toolbox, a browser game and a community hub. About 363,000 lines of code and 900+ web endpoints, all built, deployed and kept running by me alone.
- Built the live-streaming engine from the ground up: anyone can broadcast from a browser or an app, and it automatically re-broadcasts to Twitch, YouTube, Kick and more at the same time, saves the recording and auto-generates short clips. It also produces live captions and translates them into about 21 languages in real time, and uses AI to spot and label the best moments in every stream.
- Ran it like a real product: I built a deploy pipeline that updates the live site with zero downtime viewers ever notice, cut the homepage's load time roughly in half and eliminated the jarring layout jumps it used to have, and, when it came time to move everything to new infrastructure, moved every user, every account balance and every active player over with zero downtime and zero data loss.

Stack: Node.js, TypeScript, Express, SQLite (WAL), mediasoup, werift, ffmpeg, whisper.cpp, Babylon.js, Havok, OAuth2 / OIDC, RS256 JWT, nginx, systemd, Cloudflare, B2 / R2, Prometheus-style diagnostics

Data Analyst, ICQA, Amazon

PAE2 | Arlington, WA | 2024 to Mar 2026

- Owned the SOX-compliance IRDR workflow: personally researched 1,000+ inventory discrepancies and built the data systems and reporting that satisfied Sarbanes-Oxley audit requirements.
- Built SQL and Excel reporting for inventory accuracy and defect visibility; delivered dashboards, recurring leadership reports and a network-wide quality recap deck.

Stack: SQL, Excel / Power Query / VBA, Python, Anthropic API, Tool-use agents, TamperMonkey, SOX compliance

Amnesty Floor Monitor, Amazon Robotics, Amazon

Robotics launch site | 2023 to 2024

- Monitored the Amazon Robotics floor during launch operations: enforced amnesty zones, cleared obstructions and kept pod and drive-unit flow safe.

Assistant Manager / Sales Representative, Verizon Wireless

2020 to 2023

- Ranked among the district's top performers, consistently exceeding monthly quotas across phones, plans, accessories, protection and financing.
- Promoted to Assistant Manager; coached a team of 4 to 8 reps through 1-on-1s, floor coaching and skill workshops, and ran opens, closes, inventory and escalations.

Stack: Consultative sales, Team leadership, Coaching, Retail operations, Customer retention

Founder | Developer | Systems Admin, Own company, LLC

2015 to Present

- Built analytics platforms tracking 200,000+ live game servers: ingestion, search, ranking, dashboards and licensed partner APIs. Ranked first on Google for several major titles.
- Self-built and collocated 1U and 2U servers in datacenters; designed for scale and DDoS resilience and ran the whole LLC, from licenses and taxes to partner relations.

Stack: Node.js, TypeScript, PHP, Python, MongoDB, TimescaleDB, Redis, NGINX, Linux

Earlier Technical & Business Work, Devolved | GModStore | eBay

2012 to 2015

- Built multiplayer game systems, monetized in-game economies and digital products sold through ScriptFodder and GModStore.
- Produced graphics, support docs, e-commerce listings and moderation workflows, and ran online communities at scale.

Stack: Lua, PHP, MySQL, Photoshop, Source Engine

SELECTED PROJECTS

- **OpenVibe.Live**: Open live-streaming platform: RTMP, WHIP and WebRTC ingest, multi-destination restream, VODs, clips, chat, live captions and translation. 529 routes, one engineer.
- **OpenVibe.Network**: The identity and shared spine of the network: an OIDC/OAuth2 provider with RS256 tokens, the OpenCoins wallet, notifications, themes and the shared navbar every site renders.
- **Scraplandia on OpenVibe.Games**: Browser multiplayer survival building game: authoritative dedicated server, client-side prediction, Havok physics, GMod-style physgun building and an in-browser collaborative editor.
- **Autonomous IRDR Root-Cause Bot**: Autonomous agent that plans, gathers evidence, and writes complete SOX-compliant inventory research reports, hours of analysis down to seconds.

EDUCATION

Snohomish High School, WA. AP Statistics, Calculus, English, Creative Writing and Spanish. Self-taught engineer since age 12: systems, infrastructure, graphics, hardware and whatever the problem needs.
