IT and Technical Support: Linux and servers, hardware troubleshooting, customer support and escalations

SUMMARY

Hands-on technical generalist in Arlington, WA. Ten years running my own company's servers: self-built and colocated 1U and 2U hardware, Linux, nginx and DDoS resilience, and later a full infrastructure migration with zero downtime and zero data loss. At Amazon Robotics I investigated recurring pod, drive-unit and workstation defects and escalated them to RME; as an ICQA data analyst I built tools other associates used every day. Three years at Verizon Wireless on phones, plans and accessories, promoted to Assistant Manager running inventory and escalations. I document what I fix: incident write-ups, runbooks and support docs.

SKILLS

Support and troubleshooting: hardware and electro-mechanical troubleshooting, root-cause analysis, incident documentation, escalations, support docs and runbooks
Systems: Linux, server hardware (self-built and colocated 1U / 2U), nginx, systemd, Docker, Cloudflare, cloud storage (Backblaze B2 / R2 / S3 APIs), zero-downtime migrations
Network and web: HAR network-trace debugging (HARTools), DDoS resilience, WebSockets, TURN / coturn
Scripting and automation: Python, JavaScript / TypeScript, SQL, PHP, TamperMonkey userscripts, Excel / Power Query / VBA
People: customer retention and consultative sales, coaching a team of 4 to 8, opens, closes and inventory, technical writing

EXPERIENCE

Software Engineer (Contract), PowerChat

Remote | Aug 2026 to Present

- Designed and shipped the Developer API platform end to end: PowerChat became an OAuth2 authorization server with scoped consent, token lifecycle, HMAC-signed webhooks and an inbound API, so third-party apps act as pseudo-platforms feeding chat, view counts, follows, subs, currency and tips into overlays. Re-implemented Streamlabs as the first official app on the new framework.

Founder | Architect | Sole Engineer, OpenVibe

openvibe.live and 20+ domains | 2026 to Present

- Designed and built an entire network of seven apps that work together under one account: live streaming, sign-in and a virtual-currency wallet, media storage, a 169-tool toolbox, a browser game and a community hub. About 363,000 lines of code and 900+ web endpoints, all built, deployed and kept running by me alone.
- Ran it like a real product: I built a deploy pipeline that updates the live site with zero downtime viewers ever notice, cut the homepage's load time roughly in half and eliminated the jarring layout jumps it used to have, and, when it came time to move everything to new infrastructure, moved every user, every account balance and every active player over with zero downtime and zero data loss.

Data Analyst, ICQA, Amazon

PAE2 | Arlington, WA | 2024 to Mar 2026

- Owned the SOX-compliance IRDR workflow: personally researched 1,000+ inventory discrepancies and built the data systems and reporting that satisfied Sarbanes-Oxley audit requirements.
- Shipped an autonomous root-cause agent that plans, gathers evidence and writes complete IRDRs, collapsing hours of research per defect into seconds.

Amnesty Floor Monitor, Amazon Robotics, Amazon

Robotics launch site | 2023 to 2024

- Monitored the Amazon Robotics floor during launch operations: enforced amnesty zones, cleared obstructions and kept pod and drive-unit flow safe.
- Investigated recurring pod, drive and workstation defects, documented patterns and escalated to RME and operations leadership to drive process fixes.

Assistant Manager / Sales Representative, Verizon Wireless

2020 to 2023

- Ranked among the district's top performers, consistently exceeding monthly quotas across phones, plans, accessories, protection and financing.
- Promoted to Assistant Manager; coached a team of 4 to 8 reps through 1-on-1s, floor coaching and skill workshops, and ran opens, closes, inventory and escalations.
- Turned walk-ins into multi-line accounts through consultative, needs-first selling. That habit still shapes how I present systems and decisions.

Founder | Developer | Systems Admin, Own company, LLC

2015 to Present

- Built analytics platforms tracking 200,000+ live game servers: ingestion, search, ranking, dashboards and licensed partner APIs. Ranked first on Google for several major titles.
- Self-built and colocated 1U and 2U servers in datacenters; designed for scale and DDoS resilience and ran the whole LLC, from licenses and taxes to partner relations.

Earlier Technical & Business Work, Devolved | GModStore | eBay

2012 to 2015

- Built multiplayer game systems, monetized in-game economies and digital products sold through ScriptFodder and GModStore.
- Produced graphics, support docs, e-commerce listings and moderation workflows, and ran online communities at scale.

SELECTED PROJECTS

- **Amazon Userscript Suite**: Six TamperMonkey userscripts that remove daily friction from internal ICQA and AFM tooling, deep links, table enrichment, bulk actions.
- **HARTools**: Electron desktop suite for capturing, minifying, and analyzing HAR network traces, built for Amazon HAR-driven debugging.
- **Network cutover & migration suite**: Zero-downtime migration from a monolith to seven services: dry-run-first migration scripts, a three-window runbook with smoke tests, and legacy-domain redirects that kept every old link alive.
- **MP Select Mini Mods**: Extended-bed, custom firmware tuning, and Cura profile work on a Monoprice Select Mini 3D printer.

EDUCATION

Snohomish High School, WA. AP Statistics, Calculus, English, Creative Writing and Spanish. Self-taught engineer since age 12: systems, infrastructure, graphics, hardware and whatever the problem needs.
