Honestly, open to anything

- Title and level are negotiable. The team, the problem and the chance to own something matter more than the label.

Software engineering

- Full-stack web apps, platforms, APIs, payments, streaming and realtime systems, designed, shipped and kept running in production.

Data & analytics

- SQL, Excel and Power Query, dashboards and compliance reporting people actually act on, plus automation that removes the busywork.

Ops, support, sales — whatever fits

- Ten years running my own company and three leading a retail sales team: I can talk to customers as comfortably as to servers.

25+ Sites and services shipped

900+ Endpoints live in production

5 Payment processors unified

1,000+ SOX inventory cases closed

10+ Years running my company

Profile

I'm a software engineer and business owner who builds complete products and keeps them running: websites, platforms, payment systems, AI agents and the automation behind them. Over the last decade I've shipped **25+** sites and services, rebuilt a live payments program across five processors, led a sales team, and turned an **Amazon** data-analysis job into tooling other **Amazon** associates used every day. Give me a problem or a rough idea and I'll deliver the whole thing: design, code, deployment and support.

Experience

Software Engineer (Contract) — PowerChat · Remote · Aug 2026 – Present

Creator monetization platform: tips, alerts, overlays, TTS and chat integrations across Twitch, Kick, YouTube and Rumble. I own large platform programs end to end on the v2 TypeScript rewrite.

- Designed and shipped the Developer API platform end to end: **PowerChat** became an **OAuth2** authorization server with scoped consent, token lifecycle, HMAC-signed webhooks and an inbound API, so third-party apps act as pseudo-platforms feeding chat, view counts, follows, subs, currency and tips into overlays. Re-implemented **Streamlabs** as the first official app on the new framework.
- Rebuilt the payments program as one system: a provider-agnostic charge rail with five adapters (Stripe Connect, Square, PayPal, an NMI card vault and NowPayments crypto), append-only ledgers where double-crediting is structurally impossible, Tipalti payouts, recurring Pro and viewer-subscription billing, signed webhooks per provider and an admin reconciliation surface.
- Kept a fast-moving rewrite safe to ship: **240+** governed backend integration tests and **1,700+** frontend unit tests across the integrations, payments and Rumble connection work, with lint, typecheck and empty-database migration proofs in CI.

Stack TypeScript · Node.js · Express · React · Prisma · PostgreSQL 17 · Redis · BullMQ · OAuth2 · Stripe · Square · PayPal · NMI · Tipalti · Docker · GitLab CI

Founder · Architect · Sole Engineer — OpenVibe · openvibe.live and 20+ domains · 2026 – Present

An open, community-run live-streaming network I own end to end. Launched in 2026 as a single streaming site and grown, in the same year, into seven connected apps sharing one login, with me as the only engineer on it.

- Designed and built an entire network of seven apps that work together under one account: live streaming, sign-in and a virtual-currency wallet, media storage, a 169-tool toolbox, a browser game and a community hub. About 363,000 lines of code and **900+** web endpoints — all built, deployed and kept running by me alone.
- Built the live-streaming engine from the ground up: anyone can broadcast from a browser or an app, and it automatically re-broadcasts to Twitch, YouTube, Kick and more at the same time, saves the recording and auto-generates short clips. It also produces live captions and translates them into about 21 languages in real time, and uses AI to spot and label the best moments in every stream.
- Ran it like a real product: I built a deploy pipeline that updates the live site with zero downtime viewers ever notice, cut the homepage's load time roughly in half and eliminated the jarring layout jumps it used to have, and — when it came time to move everything to new infrastructure — moved every user, every account balance and every active player over with zero downtime and zero data loss.

Stack Node.js · TypeScript · Express · SQLite (WAL) · mediasoup · werift · ffmpeg · whisper.cpp · Babylon.js · Havok · OAuth2 / OIDC · RS256 JWT · nginx · systemd · Cloudflare · B2 / R2 · Prometheus-style diagnostics

Experience (continued)

Data Analyst — ICQA
Amazon · PAE2 · Arlington, WA — 2024 – Mar 2026

- Owned the **SOX**-compliance IRDR workflow: personally researched **1,000+** inventory discrepancies and built the data systems and reporting that satisfied Sarbanes-Oxley audit requirements.
- Built SQL and Excel reporting for inventory accuracy and defect visibility; delivered dashboards, recurring leadership reports and a network-wide quality recap deck.

Amnesty Floor Monitor — Amazon Robotics
Amazon · Robotics launch site — 2023 – 2024

- Monitored the **Amazon** Robotics floor during launch operations: enforced amnesty zones, cleared obstructions and kept pod and drive-unit flow safe.
- Investigated recurring pod, drive and workstation defects, documented patterns and escalated to RME and operations leadership to drive process fixes.

Assistant Manager / Sales Representative
Verizon Wireless — 2020 – 2023

- Ranked among the district's top performers, consistently exceeding monthly quotas across phones, plans, accessories, protection and financing.
- Promoted to Assistant Manager; coached a team of 4 to 8 reps through 1-on-1s, floor coaching and skill workshops, and ran opens, closes, inventory and escalations.

Founder · Developer · Systems Admin
Own company, LLC — 2015 – Present

- Built analytics platforms tracking **200,000+** live game servers: ingestion, search, ranking, dashboards and licensed partner APIs. Ranked first on Google for several major titles.
- Self-built and colocated 1U and 2U servers in datacenters; designed for scale and DDoS resilience and ran the whole LLC, from licenses and taxes to partner relations.

Earlier Technical & Business Work
Devolved · GModStore · eBay — 2012 – 2015

- Built multiplayer game systems, monetized in-game economies and digital products sold through ScriptFodder and GModStore.
- Produced graphics, support docs, e-commerce listings and moderation workflows, and ran online communities at scale.

Skills

ENGINEERING & PLATFORM
TypeScript / JavaScript · Node.js / Express · React · Python · PostgreSQL / Prisma · Go · SQLite (WAL) / MySQL · Redis / BullMQ · REST & event-driven design · PHP · HTML / CSS / SSR

STREAMING & REALTIME
RTMP / SRT / WHIP · WebRTC (mediasoup, werift) · ffmpeg pipelines · HLS / DASH · WebSockets · TURN / coturn · Restream & VOD systems · Live captions (whisper.cpp)

AI TOOLING & DATA
Anthropic / OpenAI-compatible APIs · Tool-use agents · Local inference (whisper.cpp, Ollama) · Prompt & cost governance · SQL analytics · Excel / Power Query / VBA · Dashboards & reporting · Root-cause analysis

INFRASTRUCTURE & OPERATIONS
Linux (Debian / Ubuntu) · nginx · systemd & socket activation · Docker / Compose · Cloudflare (DNS, edge, R2) · Backblaze B2 / S3 APIs · Zero-downtime deploys & rollback · Performance profiling (CDP) · DDoS resilience · Bare-metal 1U/2U builds

IDENTITY, PAYMENTS & SECURITY
OAuth2 / OIDC providers · JWT (RS256), JWKS, SSO, FedCM · Stripe Connect / Square / PayPal · NMI vault / Tipalti payouts · Ledger design & idempotency · Webhook signing & verification · SSRF / egress hardening · SOX-style audit trails

GAME DEVELOPMENT
Babylon.js (WebGPU/WebGL) · Havok physics · Authoritative servers & prediction · Lua / Source Engine · C# / C++ · Gameplay systems & economies

LEADERSHIP & COMMUNICATION
Founding & operating an LLC · Technical writing & runbooks · Coaching & team leadership · Consultative sales · Stakeholder reporting · Community moderation at scale

Education

Snohomish High School, WA. AP Statistics, Calculus, English, Creative Writing and Spanish. Self-taught engineer since age 12: systems, infrastructure, graphics, hardware and whatever the problem needs.
